KHIZAR.AI

BRAND GUIDELINE 2026

Main Logo

The khizar.ai logo combines a custom letterform with a radiating geometric mark. The symbol reads as a "K" from multiple angles, giving it a distinct, ownable identity that stays recognizable at any size. This is the primary lockup and should be used wherever space allows.

Safe Zone Logo

A minimum clear space must be maintained around the logo at all times. This padding equals the height of the icon and ensures the mark stays legible and uncluttered. Never place text, graphics, or edges of layouts within this zone

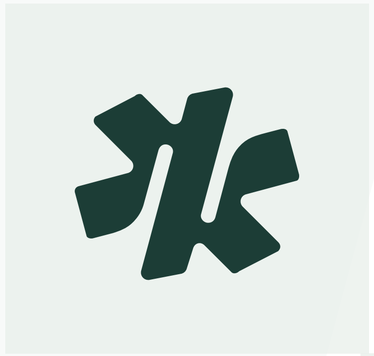

Logo On Background

The logo is built to hold contrast across light, dark, and brand-colored surfaces. Always choose the version that keeps the highest contrast against the background. Avoid placing the mark on tones too close to its own colour, as this reduces legibility.

Logo Variation

Three lockups are available: the standalone symbol, the horizontal logo, and the vertical logo. Use the horizontal version for headers and wide layouts, the vertical version for centered or square formats, and the symbol alone for favicons, app icons, and profile images.

Vertical Logo

Brand Colors

The palette pairs deep teal and near-black with a muted olive accent and a soft off-white base. Teal and black carry the primary weight across most applications, while olive is used sparingly for emphasis. Together they keep the brand calm and technical without feeling flat.

Typography

Space Grotesk is the primary typeface, used for headings, the wordmark, and any display text. Instrument Sans is the secondary typeface, used for body copy, labels, and long-form reading. The pairing balances character in headlines with clarity in extended text.

Implementation

The symbol works standalone at small sizes for favicons, app icons, and browser tabs, staying legible even at 16px. Icon versions are provided in olive, off-white, and dark so the mark holds contrast in both light and dark themes.

THANK YOU
